Event scheduling and article drafting with survey refinement and governance frameworks

## Article draft and top-of-funnel strategy

- Jessica and Petro drafted an introductory article about adopting agentic AI.
- The article functions as a top-of-funnel hook exploring organizational tension points and consequential ROI.
- The draft outlines 4 primary agent sources including delivery teams, individuals, teams, and vendor tools.

## Survey scope and questionnaire design

- Everett recommended limiting the survey to 5 questions to prevent low completion rates.
- The survey questions will combine governance topics and ROI metrics for business users.
- Rebecca established a timeline of next Tuesday or Wednesday to prepare marketing materials.

## Agent governance and assurance framework

- Everett and Tim merged the September 2026 draft version of the agent governance framework into GitHub.
- The framework requires teams to document risk acceptance and assign human accountability for agent safety.
- Ryan and Tim plan to beta test the governance framework on internal projects to evaluate effectiveness.

## Next steps

- ☐ [Jessica Dvoretz, Jennifer Wright] Finalize Survey Questions: Draft and finalize the survey questions based on the article's core themes. Ensure the survey remains concise, targeting five key questions that balance governance and ROI topics.
- ☐ [Jessica Dvoretz, Petro Vaxevanakis] Update Article Draft: Update the draft article incorporating feedback from the group and refine the language regarding agent sources. Post the clean version to the Slack channel for final review by next Tuesday.
- ☐ [Rebecca Lyus] Notify Marketing: Notify the marketing team about the upcoming survey and landing page requirements to prepare for the MACH X event. Coordinate the timeline to ensure readiness by next Tuesday or Wednesday.
- ☐ [Rebecca Lyus] Build Survey Infrastructure: Build the final survey form and corresponding landing page for deployment at MACH X and wider email distribution.
- ☐ [Everett] Publish Article: Publish an article announcing the availability of the new governance framework.
- ☐ [Ryan] Test Design Document: Perform beta testing on the agent design document using an internal project.
- ☐ [Tim] Apply Framework: Apply the governance framework to multiple internal agents to evaluate its effectiveness.
- ☐ [Ryan, Tim] Report Adjustments: Provide feedback on necessary adjustments to the framework based on real world application.
- ☐ [Jessica] Post Slack Updates: Share content or updates in the Slack channel later this week.

## Summary

Event scheduling and article drafting with survey refinement and governance frameworks

### **Event planning and surveys**

Event attendance conflicts highlighted September schedules. Survey questions drafted for C-suite articles.

### **Article strategy and taxonomy**

Content strategy uses a mini funnel approach with four agent sources. Marketing visualizations requested.

### **Governance framework review**

Framework aims to evaluate risks and ensure human accountability. Alternative to NIST documents.

## **Next steps**

- ☐ [Jessica Dvoretz, Jennifer Wright] Finalize Survey Questions: Draft and finalize the survey questions based on the article's core themes. Ensure the survey remains concise, targeting five key questions that balance governance and ROI topics.
- ☐ [Jessica Dvoretz, Petro Vaxevanakis] Update Article Draft: Update the draft article incorporating feedback from the group and refine the language regarding agent sources. Post the clean version to the Slack channel for final review by next Tuesday.
- ☐ [Rebecca Lyus] Notify Marketing: Notify the marketing team about the upcoming survey and landing page requirements to prepare for the MACH X event. Coordinate the timeline to ensure readiness by next Tuesday or Wednesday.
- ☐ [Rebecca Lyus] Build Survey Infrastructure: Build the final survey form and corresponding landing page for deployment at MACH X and wider email distribution.
- ☐ [Everett] Publish Article: Publish an article announcing the availability of the new governance framework.
- ☐ [Ryan] Test Design Document: Perform beta testing on the agent design document using an internal project.

- ☐ [Tim] Apply Framework: Apply the governance framework to multiple internal agents to evaluate its effectiveness.
- ☐ [Ryan, Tim] Report Adjustments: Provide feedback on necessary adjustments to the framework based on real world application.
- ☐ [Jessica] Post Slack Updates: Share content or updates in the Slack channel later this week.

## Details

- **MacX Event Attendance and Scheduling:** The group discussed upcoming industry events in September, noting scheduling overlaps with events like Shop Talk Nashville, Retail Club, Bloom Reach, and Microsoft Fabric in Barcelona ([00:04:22](#)). Regarding the upcoming MacX event in two weeks, Everett Zufelt and Everett's colleague confirmed attendance, while Jessica Dvoretz, Ryan Lunka, and Petro Vaxevanakis noted they were either not attending, traveling to Boston, or dealing with scheduling conflicts ([00:03:03](#)). Rebecca Lyus noted the general intensification of event planning during the final two-week run-up ([00:00:47](#)).
- **Survey Questions and Initial Article Draft:** Rebecca Lyus reminded the group that survey questions were posted in Slack on Tuesday, September 1st, to gather evidence for upcoming articles focused on C-suite perspectives. Jessica Dvoretz and Petro Vaxevanakis announced they completed an initial draft of an accompanying article designed to tee up the survey ([00:05:35](#)) ([00:09:59](#)). Everett Zufelt also noted that a September 2026 draft version of the agent governance and assurance framework had been merged into GitHub by Everett and Tim Fernihough ([00:06:51](#)).
- **Survey Design Constraints and Length:** Everett Zufelt emphasized that the survey form must be kept short—ideally around five questions—to prevent low participation from event attendees ([00:08:58](#)) ([00:12:28](#)). Jessica Dvoretz agreed on keeping the survey concise while straddling the domains of governance and return on investment ([00:13:41](#)). Ryan Lunka suggested combining questions three, four, and six regarding written policies to streamline the survey down to essential items ([00:15:20](#)).

- Article Funnel Strategy and Series Structure:** Petro Vaxevanakis explained that the content strategy relies on a mini-funnel approach, where a top-of-funnel article serves as a hook to draw interest and drive traffic to a survey, leading toward a comprehensive report or a series of five to six articles rather than a single large report ([00:16:44](#)) ([00:48:02](#)). Jessica Dvoretz and Petro Vaxevanakis noted that the article acts as an umbrella addressing consequential return on investment and governance tracks ([00:18:50](#)).
- Article Taxonomy and Sources of Agents:** Petro Vaxevanakis and Jessica Dvoretz outlined the article's core taxonomy, identifying four primary sources of agents within organizations: engineering and delivery teams using agents for deployment acceleration, individual users creating tools via platforms like Claude, teams automating workflows independently, and external vendors embedding agents into existing software ([00:21:09](#)) ([00:29:05](#)). Ryan Lunka and Everett Zufelt discussed the semantics of the categories, with Ryan Lunka concluding that the groupings effectively communicate the core concepts despite minor semantic overlaps ([00:32:20](#)).
- Article Visualization and Marketing Collaboration:** Everett Zufelt suggested adding a note to the draft article so that the MACH marketing team can develop appropriate visualizations, such as a table illustrating tension points like innovation versus risk management ([00:37:20](#)). Petro Vaxevanakis agreed to outline the tension points for marketing ([00:38:29](#)). Rebecca Lyus established a deadline of next Tuesday or Wednesday for receiving the final draft so marketing could build the necessary landing page and event form in time for the MacX event ([00:39:37](#)).
- Survey Question Refinement Process:** Jessica Dvoretz offered to take a lead role in refining the survey questions, leveraging their background in consumer insights and survey writing. Jennifer Wright mentioned they were working on a second pass of potential questions tied to the article, and agreed to coordinate offline with Jessica Dvoretz to finalize the questions before posting them in the Slack channel ([00:41:04](#)) ([00:54:45](#)).
- Integration of Article and Governance Tracks:** Everett Zufelt and Jessica Dvoretz addressed the relationship between the general awareness article and the separate governance framework, concluding that while distinct—focusing respectively on understanding adoption versus managing safety and risk—they complement each other by highlighting the fundamental need for governance

(00:42:15). Tim Fernihough emphasized that the content should help audiences recognize hidden risks and establish proof of awareness (00:43:20). The group agreed to publish the content in parallel as an ongoing series before consolidating the materials into a larger ebook or report (00:45:35).

- **Agent Governance and Assurance Framework Review:** Everett Zufelt and Tim Fernihough summarized the newly merged agent governance and assurance framework, explaining that its primary goal is to force organizations to explicitly evaluate risks and ensure that a human being takes accountability for launching potentially unsafe agents (00:50:24). Tim Fernihough described the framework as a documentation tool for risk acceptance and current state tracking, utilizing levels ranging from level zero upward (00:51:28). Ryan Lunka praised the framework for offering a lightweight, practical alternative to massive NIST documents and announced plans to beta-test it on an internal project (00:52:22). Tim Fernihough similarly committed to running multiple agents through the framework to gather practical feedback for future adjustments (00:53:30).

# Agent Ecosystem Working Group 2: Agent Adoption and Operations - MACH Alliance - Transcript

00:00:47

**Jennifer Wright:** Hello.

**Rebecca Lyus:** Hello. How are you doing?

**Jennifer Wright:** I'm great, thanks. How are you?

**Rebecca Lyus:** I am good. We are now in the two week runup. So, everything is intense.

**Jennifer Wright:** You're like, what happened to all that planning and us feeling good months ago? Like,

**Rebecca Lyus:** Yeah.

**Jennifer Wright:** it's like a wedding though, I think. Like, no matter what, no matter how much planning you do in advance, like the couple weeks in advance are chaos.

**Rebecca Lyus:** I so I got married this year. So So I have that comparison.

**Jennifer Wright:** Oh, okay. Great.

**Rebecca Lyus:** Um I planned the wedding to the inch of my life. It had a brochure that I could hand people in the wedding party going, I want you to go and set this up. It was a printed document that was spiralbound. Um,

**Jennifer Wright:** Yes.

**Rebecca Lyus:** everyone thought I was insane until the day before when I get to people.

**Jennifer Wright:** Yeah. Yeah.

**Rebecca Lyus:** Oh my god, this is amazing.

**00:01:45**

**Jennifer Wright:** Yeah. Um,

**Rebecca Lyus:** So,

**Jennifer Wright:** a girl after my own heart. Well, a belated congratulations on getting married this year.

**Rebecca Lyus:** thank you.

**Jessica Dvoretz:** Congrats.

**Rebecca Lyus:** Thank you.

**Jessica Dvoretz:** I joined late and missed half the story,

**Rebecca Lyus:** It's

**Jessica Dvoretz:** but I caught that.

**Jennifer Wright:** We're saying planning events versus planning weddings in the the couple weeks to

**Rebecca Lyus:** Yeah,

**Jennifer Wright:** go.

**Jessica Dvoretz:** Don't you think it's easier to plan for other people?

**Rebecca Lyus:** I found it easier to plan for the wedding than for this. Um, probably because I have to build an event app. Um, so there's that difference.

**Jennifer Wright:** You didn't have to do that for your wedding.

**Rebecca Lyus:** No,

**Jennifer Wright:** Ryan, you're somewhere new today or have been delegated to the hallway. Oh, you're on mute.

**Rebecca Lyus:** I'm muted.

**Ryan Lunka:** I am in the office. It just looks like uh kind of does look like I'm in a hallway.

**Jennifer Wright:** Are you in the office every They or just certain days.

**Ryan Lunka:** Um, I go in most days.

**00:03:03**

**Ryan Lunka:** I don't usually go in on Friday, but I am a I prefer the office. I worked from home almost five years straight when I had my own startup and

**Rebecca Lyus:** Yep.

**Ryan Lunka:** starting in CO and then continuing on there and gets a little mind-numbing after a while.

**Rebecca Lyus:** All right, we'll just give it two more minutes and then we will crack on. Um, so who are we expecting to see for MacX in two weeks?

**Jessica Dvoretz:** Unfortunately,

**Rebecca Lyus:** Silence consult.

**Jessica Dvoretz:** not me.

**Ryan Lunka:** Yeah, I don't think I'm going to get the nod on that one either.

**Rebecca Lyus:** Oh.

**Jessica Dvoretz:** I'll be in Boston.

**Rebecca Lyus:** Oh, lovely.

**Jennifer Wright:** Everett. Are you going

**Everett Zufelt:** I am.

**Petro Vaxevanakis:** still

**Everett Zufelt:** Yes.

**Ryan Lunka:** I think it's possible our president might be out there. I thought I heard him say that, but I can't remember.

**Rebecca Lyus:** Yeah.

**Petro Vaxevanakis:** permit me. It's still TBD. Uh my colleague Jess is definitely going, but I don't know if I'll make it.

**Rebecca Lyus:** Okay.

**00:04:22**

**Rebecca Lyus:** Well, that's a shame. Um I know

**Petro Vaxevanakis:** Well, I I hadn't I hadn't planned coming until uh we started this discussion here. So, and I'm all excited to go.

**Rebecca Lyus:** Oh,

**Petro Vaxevanakis:** But yeah, it's a actually it overlaps with another thing. So, I need to kind of like uh try to see how I will uh juggle both.

**Rebecca Lyus:** that is fair. There's a lot of events this September I've noticed. I feel like we're trying to fit them all in before um the autumn Christmas period.

**Jessica Dvoretz:** Yes. I think Shop Talk Nashville is the same week.

**Rebecca Lyus:** Yeah.

**Jessica Dvoretz:** Retail Club before Bloom Reach is doing something.

**Rebecca Lyus:** Yeah. It's just man.

**Jessica Dvoretz:** There's a Microsoft Fabric in Barcelona. Everyone I talk to is going to something different.

**Rebecca Lyus:** Yeah,

**Ryan Lunka:** Yes.

**Rebecca Lyus:** it's warm across the world, aren't we? Right. So, to catch up, the last session we had, we started talking about setting up a survey, which people may have seen the questions that were posted in the Slack channel.

**00:05:35**

**Ryan Lunka:** It's still hot.

**Rebecca Lyus:** The reason for this survey was to kind of um use this as a basis for our evidence in regards to articles. Um we didn't want it to be too long and it was going to be predominantly focused on seauite. Uh, I'm just Scrolling back up. It was on Tuesday the 1st of September that I posted the questions. Um, and then Everett gave his feedback. So, have people had a chance to review it or would you like some time now just to have a quick review?

**Jessica Dvoretz:** And then um Petro and I are just in time, but we do have an initial draft of the article to accompany that to share with the group.

**Rebecca Lyus:** Oh, fantastic.

**Jessica Dvoretz:** Literally just in time.

**Petro Vaxevanakis:** Well,

**Ryan Lunka:** It's

**Jennifer Wright:** Do we do we want to start with Pat?

**Petro Vaxevanakis:** Jess was a bit earlier on time. H I I I got here just on time. So, yeah. But yeah, it was really fun to work with Jess, but I kind of like uh disappointed her yesterday because I had a fire here at

**00:06:51**

**Jessica Dvoretz:** No difficult.

**Petro Vaxevanakis:** work. But yeah, I think we've got a we've got an early draft that u we can all read and uh then take it from there.

**Rebecca Lyus:** Okay.

**Jessica Dvoretz:** And then maybe it would make sense to make sure the draft and the questions align.

**Rebecca Lyus:** Yes, that seems quite sensible. I didn't see

**Everett Zufelt:** and and then then the maybe the third thing we can chat about. So that's two things to chat about the the survey and the article and then the third thing uh big thanks to Ryan for his feedback and then I don't know if we have Tim on the call today but Tim and I uh walked through over the weekend and we have the September 2026 draft

**Ryan Lunka:** Sorry.

**Everett Zufelt:** version of the agent governance and assurance framework uh merged in and ready for other people to kick around and give feedback on. So we I think those are three pretty meaty items for the agenda

**Rebecca Lyus:** Yeah.

**Jessica Dvoretz:** So I'm just looking at um Everett's list which I finally found and I think they align really well.

**00:08:00**

**Jessica Dvoretz:** I think in working on our article we would probably put a question before that which is how do you define an agent and or can you define an agent?

**Everett Zufelt:** or what it does your organization have a consistent definition of agent or something like that because it's it's less about the person and maybe more about the company. Right?

**Jessica Dvoretz:** Well, I

**Everett Zufelt:** If Bob if if the person who came to the agent event can define one is probably less important than does the company.

**Jessica Dvoretz:** so I would advocate for both because I bet if we put a free form,

**Everett Zufelt:** Okay.

**Jessica Dvoretz:** how would you define an agent and it is a group of people coming to the agent event, we will still get many different.

**Everett Zufelt:** Oh, I agree. I agree completely. It took us two hours to define it in the architecture group and we still ended up with four answers.

**Jessica Dvoretz:** So,

**Everett Zufelt:** Um,

**Jessica Dvoretz:** I think that would be like really good content and finding to be able to kind of pull some of those quotes from like a free Answer.

**00:08:58**

**Everett Zufelt:** so let I I like that.

**Jessica Dvoretz:** in the survey.

**Everett Zufelt:** Let me put a design constraint for the group. If we had to pick only five questions because most people if they see like seven, 10, 12, just close it and walk away. So if we h and I'm not saying we can only do five, but we we if we only could do five, what are the five we would do?

**Ryan Lunka:** Guys, I am sorry. I am trying to find the list of questions we're talking about. I only see four in a single Slack message somewhere.

**Everett Zufelt:** Rebecca,

**Ryan Lunka:** What?

**Everett Zufelt:** do you want to just ping the thread so that it pops?

**Ryan Lunka:** Yeah. What am I What am I missing?

**Everett Zufelt:** Yeah.

**Rebecca Lyus:** Yep.

**Jessica Dvoretz:** This is from your message, Everett. I have it open right now, so I can copy it.

**Everett Zufelt:** Lovely.

**Jennifer Wright:** It starts with in it starts with inventory questions.

**Everett Zufelt:** Uh, I it was in a thread, right? I just Rebecca and love it.

**00:09:59**

**Jessica Dvoretz:** I I just I just copied it into the main Slack channel.

**Rebecca Lyus:** Yep.

**Ryan Lunka:** Okay. Yeah, I was not finding this. Thank you, Jess.

**Jennifer Wright:** and the title for this is

**Ryan Lunka:** IC

**Jessica Dvoretz:** So,

**Jennifer Wright:** cuz I missed last meeting.

**Jessica Dvoretz:** so our working title for the article that we want to put out to tee up the survey, and I will credit Pro, this is a really good I thought it was great. Um, is you've already adopted a genic AI. You just didn't decide to.

**Petro Vaxevanakis:** I think that was your title.

**Jessica Dvoretz:** I think it was yours.

**Petro Vaxevanakis:** Okay, maybe maybe I preferred another one, but finally I found it out of context.

**Ryan Lunka:** Sorry.

**Jessica Dvoretz:** Um but I think the survey is the so what we discussed is um kind of a state of the union on agenic AI in your business today. And as we were we started from the place of consequential ROI like that was what we wanted to write an article

**Ryan Lunka:** So that

**Jessica Dvoretz:** on.

**00:11:08**

**Jessica Dvoretz:** And we very quickly came to the assumption to the realization that the only data that exists on on ROI con that would help us from a data source is about the engineering organization. And since we kind of we felt that that had been well discussed and we were just kind of summarizing Google's DORA um where we could really add value is kind of how do you start thinking about consequential AO ROI beyond the engineering organization and then we realized that no data exists and

**Jennifer Wright:** Eric.

**Jessica Dvoretz:** um so there might actually be a way to launch a survey to the MACH membership um and start developing um a first party data source. uh to help um members and the broader community think about consequential ROI. Um and so what we agreed to do was kind of an article teeing this up as well as kind of that initial survey and ideally we'd have the survey um ready for mock X so we could have QR codes

there for people to quickly snap. If I summarized anything wrong, someone please jump in.

**00:12:28**

**Jennifer Wright:** It feels like Everett, your list of 10 questions is more governance related than ROI related.

**Everett Zufelt:** I think they are. Yep. And I'll say just like it says in the post, um, couldn't care less what questions we use. Do care that there's probably only five of them. If we choose to do too many questions, nobody will fill in the form. That's just how the the level of people that go to an event like this, that's just their behavior.

**Jennifer Wright:** Oh, it's for the event not general members.

**Everett Zufelt:** Yeah.

**Jennifer Wright:** Okay.

**Jessica Dvoretz:** I think it's both.

**Rebecca Lyus:** It's mixed. It's both.

**Everett Zufelt:** What what I all I all I can tell you is if your form is too long, you will find out you get 10 submissions.

**Ryan Lunka:** It's

**Everett Zufelt:** Keep the form short.

**Jennifer Wright:** Yes. I just our audience is a little bit bigger than just the

**Ryan Lunka:** not

**Jennifer Wright:** the side of things.

**Rebecca Lyus:** Yeah. Uh, we were planning to do to present it at the event, get people to do it, as well as send out an email which I got Lauren to give

**00:13:41**

**Everett Zufelt:** awesomeness.

**Rebecca Lyus:** the okay for.

**Everett Zufelt:** I will reiterate once more even doing that you will get very few submissions if the form is

**Jessica Dvoretz:** So I don't So I think that I agree with Everett. We should start with a very short form. See how many people we can get to respond. If they respond and are willing to give us their email address, and we don't have to require it, but if they are willing to give us their email address, it might be an audience to go back to with deeper questions.

**Ryan Lunka:** Yes.

**Jessica Dvoretz:** So, um I keeping it short, I um agree that we pro if we only have five questions, we probably want to straddle the world of worlds of governance and ROI because those are the emerging lanes for this group. Um, and it seems like in your questions, Everett, that might mean focusing on um a combination of um inventory Corey. spend um deployment andor oversight combination and potentially like results or um which I don't think is a section you have today but might help with ROI like what are you expecting to see

**00:15:20**

**Everett Zufelt:** Yep, I think that makes sense. I think we just need to pick five questions because none of them are going to be my questions. I spent 10 seconds on. I have no feelings attached to them whatsoever.

**Ryan Lunka:** So,

**Jennifer Wright:** Maybe Jess.

**Ryan Lunka:** looking at the the 10. Go ahead.

**Jennifer Wright:** Oh, no. You go ahead,

**Ryan Lunka:** Sorry.

**Jennifer Wright:** Ryan.

**Ryan Lunka:** Uh, okay. Just looking at the the 10 that Jess just reposted here. Um, maybe with a slight tweak to number four, what exists in writing? I think you can probably incorporate question three and question six. into that because those are like more specific. It's asking about more specific policies that would be included in what's in writing. Um if we're like being ferocious about editing down, I think there's a possible way to do that.

**Jennifer Wright:** Um,

**Ryan Lunka:** I can I can tell there was a fierce agreement there.

**Jennifer Wright:** Jessica and overwhelming yeses say like maybe like if it's the accompanying survey to go with the article and consequential ROI.

**00:16:44**

**Jessica Dvoretz:** Sure.

**Jennifer Wright:** Do you guys maybe want to do like two minutes on some of like the key pieces of the article and then we can maybe see if there's a way to like line up some of the questions to the article itself.

**Petro Vaxevanakis:** Um,

**Jennifer Wright:** We don't have to group read an article though,

**Petro Vaxevanakis:** by the way,

**Jennifer Wright:** but

**Petro Vaxevanakis:** no no and and it's sort you can read it right after and then we can carry on on the thread. I think what one thing that I need to understand is so the second piece of content it will be more of a like report right so not an article not like something that it's kind of like it has a bit more weight on it and it's kind of positioned as a report is that correct because the I'm saying that because the way that Jess and I thought about the article is so in any piece of content And we need to get people's attention. And the concept here is to create a mini funnel. The article that we've written is a hook.

**00:17:46**

**Petro Vaxevanakis:** So brings attention into something that most people care without ending into a conclusion. Uh but actually inviting people to kind of like join the journey.

**Everett Zufelt:** Yep. I like that.

**Petro Vaxevanakis:** And then that leads to people who want to actually follow the series until we are ready to publish a report which could be on governance or whatever that is. So, it's more of like a more of like a funnel rather than a And this is the at the

**Everett Zufelt:** And I and I Yeah,

**Petro Vaxevanakis:** sitting at the very top.

**Everett Zufelt:** I like the concept there. And like I wasn't on the call a couple of weeks ago, but what I recall from looking at the notes was as a group uh it was decided that maybe you know five or six articles in a series would be more useful than a big old report. But now that doesn't mean that the articles can't have substance, right? You can have articles with primary research in them.

**Ryan Lunka:** What's that?

**Everett Zufelt:** I just like that's what I recall seeing in the notes is that as a group it was decided to do like fiveish article series and not do a big report.

**00:18:50**

**Everett Zufelt:** Is that still where people are sitting?

**Petro Vaxevanakis:** I for me like that this would be a beautiful campaign in the sense that you create articles and then for those that they were not following the journey you then package it into a report which carries all of the input getting there and then you publish everything as a report or you do it as a webinar or like you can repurpose that content. But yeah, I think that I I'm I I would love if we could go into

something like that. So try to orchestrate some articles that then also bring the the audience with us to get uh the research that we need and then at the end kind of like publish that as a

**Jessica Dvoretz:** And when we wrote this, we had in mind that we were creating an umbrella for a track around consequential ROI and a track around governance because we know we knew that Ryan and Everett were working on governance in parallel. Should we just put it in the channel, Pro? Because I think it will take people Maybe just put the article part,

**00:19:51**

**Petro Vaxevanakis:** Yeah.

**Jessica Dvoretz:** not that whole massive um it will take people about 2

**Petro Vaxevanakis:** Yes. Um,

**Jessica Dvoretz:** minutes to read and my short

**Petro Vaxevanakis:** let me just make a copy so that I don't have all the notes and everything and it's just a clean draft. Actually, wait. I'll just share with you and then I'll clean it after and I'll tell you how we navigate. One sec. So I'll put it here in the thread for everyone to open it and then I'll put a clean version on the on the group. Um and at the same time sharing my screen just to tell you how to navigate if you land on it. So um working structure you can expand this. It was when Jess and I were working. Draft article is the actual article. I think the I've left at the top the framing which is basically creating a topfunnel article which is a teaser for a survey that we want to trigger during day. event. Um, and then the the scope of the article is yeah, I mean, we already we already kind of like discussed this.

**00:21:09**

**Petro Vaxevanakis:** Um, but yeah, the draft article here, it starts kind of like with a questions. How many agents do you have at your business right now? then goes into the different lanes of where these agents could be coming from. And then trying to create like the tension in the business where like the the fact that you it's a fact that you have multiple agents and they're coming from all these sources and this is creating a tension which uh it could be innovation versus risk management, local optimization versus enterprise coherence, business ownership versus technical stewardship. just trying to kind of like without um saying what's right showing the tension points. And then the article finishes with uh the fact that we have a lot of data about lane one which was all the agents coming from engineering but we don't have uh anything from the new lanes which is kind of like uh individuals and teams and new vendors like Salesforce now becoming fully agentic and what we're seeing that we're missing a lot of data and this is where we're inviting you folks to contribute and see what's actually happening.

**00:22:37**

**Petro Vaxevanakis:** Jess, anything to add

**Jessica Dvoretz:** Nope, that's a great summary.

**Petro Vaxevanakis:** and then this can easily go to governance as another uh route again because the governance is part of the tension points. So I think this is where we can just bring people in and then start sharing results um that we that the whole community is uh

**Ryan Lunka:** It's still

**Petro Vaxevanakis:** providing.

**Ryan Lunka:** cute. All right.

**Jennifer Wright:** the section that is the questions you should be asking. Those aren't the ones that you want for the survey or were those you were originally like when you were brainstorming thinking would go in the survey or oh it's before you take our survey. Okay, I answered myself.

**Petro Vaxevanakis:** Well, I think that um most like we would love to Yeah, sorry. No, it's it's also that we this is a very first draft potentially. This is something that we don't

include here or it's something that we include, but the same questions are also I mean the the dream would be to pop that on a slide during the event and then have people voting uh through an app uh that we can just get the responses through there.

**00:24:21**

**Petro Vaxevanakis:** That would be the dream. And I think Rebecca, you mentioned that we could easily do something like that, right?

**Rebecca Lyus:** Yeah, I can basically create a form and a landing page for people to go to.

**Petro Vaxevanakis:** And I guess this questions is also the where we want most of your contribution. This was like really really fast. Um but would love your contribution here because then from the questions we get results and then we can see what more do we want to gather. Um that could then also develop into more more tracks.

**Jessica Dvoretz:** Ryan, to your point, I think um we don't have we rather than saying we couldn't agree, we could say, you know, within ourselves we've had hours of debate or something like that um without having

**Ryan Lunka:** Yeah.

**Jessica Dvoretz:** to undercut the other group.

**Ryan Lunka:** Yeah. My comment is is uh kind of a nit more than anything. So other I mean other

**Jessica Dvoretz:** All comments are and accepted because I think that's a good point.

**Ryan Lunka:** otherwise though I actually really like this article.

**00:25:41**

**Jessica Dvoretz:** Thank you.

**Jennifer Wright:** I've just been brainstorming on the side with my friend Claude on uh some potential questions that we could do that are tied to that. So, just reading through it.

**Ryan Lunka:** Um, this is the same feedback I had on the article or the content that I was iterating with Everett. Um, again, I'm scanning. I'm not reading this word for word. You're it's using the word lane a lot, like talking about lanes. Is it pretty concrete about what that means or is that sort of an assumed abstraction on top of some concept in

**Jessica Dvoretz:** Well,

**Ryan Lunka:** this?

**Jessica Dvoretz:** they are defined um in what section is it? Uh I find

**Petro Vaxevanakis:** Yeah, it's uh it's just here

**Ryan Lunka:** Okay.

**Jessica Dvoretz:** them,

**Ryan Lunka:** Yeah. Yeah. Yeah. Okay. I see it now. I got you.

**Jessica Dvoretz:** but we are not wed to the word lane. So if you think there's a better word,

**Petro Vaxevanakis:** for sure. Yeah,

**00:26:52**

**Jennifer Wright:** It's

**Petro Vaxevanakis:** the wording this is the very first draft. wave. Imagine it like you know this is we did the first positioning on the structure meeting then the draft is like going towards messaging but we still have to do copyrighting. Uh we need to remove a lot of uh um cludations here and make it like a more of a a real article but it's it's good reference.

**Ryan Lunka:** there.

**Petro Vaxevanakis:** I think Ryan what I really loved in this section because we were discussing it quite a lot with Jess is I felt lane one is not a lane h two three and four are but then Jess had a really really nice uh argument that basically lane one is the benchmark like

**Ryan Lunka:** Heat.

**Petro Vaxevanakis:** lane one is what we've got so far so this is the only thing we know and this is the only thing that we've got data on and so on and then that becomes a really nice reference into understanding better lane to lane three and lane four. Um, now I'll stop using the word lane because most likely it looks I'm going to change it, but yeah, you get the the idea.

**00:27:58**

**Ryan Lunka:** Well, yeah. I mean,

**Jennifer Wright:** I

**Ryan Lunka:** I do I do see how engineering and delivery it does feel like it's like a it's like a different thing than what the other three are, right? I kind of expected engineering and delivery and then sales and marketing and then operations or something like that

**Petro Vaxevanakis:** Exactly.

**Ryan Lunka:** because you're kind of speaking to a functional area of the company where two, three and four are um yeah types are like

**Jennifer Wright:** les.

**Ryan Lunka:** um ways that Yeah. Yeah. The text is good enough.

**Petro Vaxevanakis:** We need we need to we need to frame it because uh at first when you're reading it, you have the same everybody has the same thought. But I really love how Jess explained this to me and maybe maybe give me like a little bit of time.

**Jessica Dvoretz:** What this is intended to be and we will get the and any suggestions for language would be great but what this is intended to be are the four sources of agents in your company. Um, and if you recall on I don't know if it was last call or the one before um actually

**00:29:05**

**Ryan Lunka:** Okay.

**Jessica Dvoretz:** um these were different people had all of these in mind first. Um and Dora basically assumes it's number one which is why I think it's important to have number one. Um but so um so

**Everett Zufelt:** What are the four what are the four sources?

**Ryan Lunka:** Seven.

**Everett Zufelt:** Just just read that.

**Jessica Dvoretz:** one was kind of using um agents to accelerate um or using agents for coding and accelerating deployment within the engineering

**Everett Zufelt:** Yep.

**Jessica Dvoretz:** department.

**Everett Zufelt:** Mhm.

**Jessica Dvoretz:** two is the world of individual users and teams um creating agents within Claude um or

**Everett Zufelt:** All over the place. Who knows where?

**Jessica Dvoretz:** um um three is

**Everett Zufelt:** Yep.

**Jessica Dvoretz:** essentially um teams. So I guess two was more individuals like I have a job to do. I upload my spreadsheet. I like create a a mini agent for myself. Three is kind of this idea that teams are automating workflows. Um but they are not necessarily doing it in parallel, right? And it kind of hits on this the idea of sources of truth, right?

**00:30:15**

**Jessica Dvoretz:** So if um in today's world uh merchandising ops and finance can come to a meeting with different definitions of inventory on hand um the workflows that they create will kind of anniversary that and codify it um and move a lot faster. And

then I think number four was something I hadn't thought about but was Dylan's primary focus which was um the vendors where you already have contracts are embedding

**Everett Zufelt:** Yeah.

**Jessica Dvoretz:** agents and you don't necessarily know what that's giving to your organization. s\*\*\*.

**Everett Zufelt:** So, so I'm hearing delivery teams using agents to deliver. Individuals are building something in GitHub enter or sorry the Google workspace enterprise clawed all over the place. teams are building maybe more operational things and then the fourth one is your SAS products have agents popping up all over the place too feels right

**Jessica Dvoretz:** Correct.

**Petro Vaxevanakis:** Yeah. And then on the la on the last one, I just added also new agentic platforms that uh teams are buying. I bundled it with the vendor agents um which is again kind of like

## 00:31:21

**Everett Zufelt:** can you give like two can you give one or two examples

**Petro Vaxevanakis:** Yeah. So do you know agency the platform that was just acquired by Cladio?

**Everett Zufelt:** I'm not but you're thinking like a you're thinking like a crew.ai or something like

**Petro Vaxevanakis:** I imagine okay sorry let me so yeah like an

**Everett Zufelt:** that.

**Petro Vaxevanakis:** agentic layer that comes in the business where everybody can just query everything and it's kind of like a knowledge base but finally it's pulling from so many sources that maybe you didn't even want people to have

**Everett Zufelt:** It's it's in Yeah,

**Petro Vaxevanakis:** access to this information.

**Everett Zufelt:** that's an it's an interesting one to me because and I don't want us to have a huge debate about this because it could take forever. I kind of think of like your

the fourth bucket you've got I kind of think as more like content stack agent OS, right? We own content stack, they add this feature. Now all of a sudden there's a new like there's a new place for agents to exist versus and even that one maybe falls even into bucket two.

**00:32:20**

**Everett Zufelt:** Um because it because maybe the separation is exactly right because maybe in my brain like

**Ryan Lunka:** Robo and at last would be a good example too.

**Everett Zufelt:** the separation is where the agents are being built versus how the agents are being used. Right? And and again don't want to over complicate it and I think your narrative is probably fine for the article but like delivery uses them, individuals use them,

**Ryan Lunka:** This is

**Everett Zufelt:** teams use them and some of them are built into software. That's probably a simple narrative, but like if we take like a crew AI that could be used by teams or developers or individuals, you know, it wouldn't be built into software per se because it is the agent platform.

**Jessica Dvoretz:** So I think it's about who. So I agree. If we're at who uses them,

**Everett Zufelt:** It's the who who not where

**Jessica Dvoretz:** if it's who uses them, there are three. If it's who builds them, there are four.

**Everett Zufelt:** and I think maybe that that's the right that middle who builds them.

**00:33:14**

**Everett Zufelt:** Some you're just going to wake up in the morning and your vendor is going to have turned on an agent in the thing you owned for years.

**Jessica Dvoretz:** Yes.

**Everett Zufelt:** That's your bucket for and I think for a business user that's the more important lens.

**Jessica Dvoretz:** Yes.

**Everett Zufelt:** who builds them versus uh you know the the technical where does the thing live off in the cloud somewhere.

**Jessica Dvoretz:** And because I think the point that we wanted to make is technology organizations have put a lot of thought into what agent building looks like in their organizations. There's companies have put a lot less thought into agents that are built by individuals outside of the technology team. Um teams going off and building their own agenic workflows and the agents that are arriving from vendors that they're unaware of. I think that's what we were going for.

**Everett Zufelt:** I like

**Ryan Lunka:** Yeah. I mean, I'm uh I'm personally convinced that this taxonomy, while like if you get really into the semantics of it, is maybe not perfectly consistent, I for the purpose of what you're trying to communicate, I think it does a good job.

**00:34:23**

**Ryan Lunka:** Like that is that is a reasonable way to just go here's here are the chunks of these things that are showing up in your environment and like who cares about the semantics. It just it does describe it well.

**Jennifer Wright:** I think the challenge is

**Jessica Dvoretz:** But if you've got better words, please put them in the comments because we would love to adopt them.

**Ryan Lunka:** Yeah, I don't know if I have better words necessarily. actually almost convinces me that lane is a better word than I initially thought because it while it does sound a little AI sloppy, it it is an ambiguous enough word to cover that these are sort of abstract groupings.

**Jessica Dvoretz:** It could be source, but we can work on it. But they are somewhat grouping.

**Petro Vaxevanakis:** Yeah,

**Ryan Lunka:** Yeah.

**Petro Vaxevanakis:** I think I think we need to work on it a little bit. I'm also be conscious that I from the structure I generated this quite fast without uh proofing it first. So yeah, the copyrighting needs work and we'll find the right words.

**00:35:17**

**Petro Vaxevanakis:** That's uh that's our job at least mining I think. So we should be able to do that quite well.

**Tim Fernihough:** If I can offer Sorry,

**Jennifer Wright:** I I think Oh,

**Tim Fernihough:** go ahead.

**Jennifer Wright:** I just going to say I I feel like it is trying to convey like I think there's a question of who builds it and where does it come from. I think the third piece that it's trying to also encompass is the maturity and so it's I think in trying to do all of those three things um uh that that's where the challenge is. I don't have the right answer. I I kind of want to give a bit of a think on it and I know you guys are as well. Um, but I think that Lane conveys a lot of clarity, whereas this is, hey, you know, there's a lot of different places these can come from, groupings, buckets, classifications, like that type of thing. Uh means that you don't have to do as much I uh leg work in terms of uh trying to cover all those different facets to it.

**00:36:18**

**Jennifer Wright:** I'm sorry, Tim, were you gonna say something?

**Tim Fernihough:** Well, kind of just what you said at the end there, like I mean when Everett and I went through um our topics over the weekend, it's I think what we're trying to do is create classification mechanisms, taxonomies, uh ways of interpreting all of this in a way that our audience can, you know, wrap their head around everything and figure out how they move forward. Like we even have like level zero through level three for the way that we classify things in in our governance framework. So I I think like having it's unrelated to this like I I know it's like we're talking about sources of where the agents come from but you know all of the different things that uh in this working group and in our own sort of internal orium ways of trying to address this we have six dials and three pillars and five approaches and four classifications of where the agents come from and four levels of governance etc. I think it's just anything we can do to make it easy for them to to visualize will help it perhaps achieve its purpose.

**00:37:20**

**Everett Zufelt:** I I like the idea of I do I think that's an interesting one. Um I'm curious, have you guys have you two considered what visualization, if any, could help people interpret this article.

**Petro Vaxevanakis:** Yeah, I think it's the attention points, the main visual.

**Everett Zufelt:** Okay,

**Petro Vaxevanakis:** So it's it wouldn't be the where agents

**Everett Zufelt:** I agree.

**Petro Vaxevanakis:** uh are built at this at this level at the very top before we go into any other topics such as the report that you guys are working on governance. I think it should be the tension points because it's where I think this is also well nobody knows what's right like is it is it better to just let the business run fast or is it better to make sure that you don't break anything I think this is a very interesting point

**Everett Zufelt:** I like I I think I think that's a really So here's here's what I'd recommend. then flag that as just a little note in the article and then when this goes over

**Jessica Dvoretz:** Amazing.

**Everett Zufelt:** to the the marketing team over at Mock, they'll work on a a visualization for like, hey, if you if you two have an idea about what you'd like it to be, toss one in there.

**00:38:29**

**Everett Zufelt:** But if you don't and you just think there should be one, just make a note and then when the team when the mock marketing team gets this, they'll they'll think through what the right visualization should be.

**Jessica Dvoretz:** I didn't realize we had that resource.

**Petro Vaxevanakis:** Yeah.

**Everett Zufelt:** We do.

**Petro Vaxevanakis:** Yeah. For now it's just a table like uh which is like um the tension points left right um something that you want and something that you also want. So you want innovation, teams trying things without waiting for approval, but you also want risk management, knowing what's running and what it can touch. So they're like just formed on a table, but we can think a little bit how we would visualize something like that. And then there's three. We've we had the low attention points just did a really good job to kind of like narrow them all in three, which I think that they finally encapsulate all of the others um at a higher level.

**Jessica Dvoretz:** and Ever and Tim, it's very consistent with the uh what Jason was saying in I he was on some um Rick Watson webinar last week and I was like,

**00:39:37**

**Petro Vaxevanakis:** Should

**Jessica Dvoretz:** "Oh, that's what we wrote." So hopefully we're all saying the same thing. Awesome.

**Petro Vaxevanakis:** we

**Jessica Dvoretz:** So appreciate any feedback. We will turn another draft. Rebecca, can you give us any sense of timeline like given that we are in the final weeks um final days like when would we need to get a draft over to the marketing team to do this right?

**Rebecca Lyus:** Uh, okay. So, let's be realistic. Um, the email that can go out can be atamacx theoretically, can't it? because we're going to be presenting the form at MacX, but then it goes out to a wider audience. So, I could build the form super last minute if we needed to. So, ideally by next Tuesday, Wednesday is the absolute latest and I will let marketing know so they can sort a landing page and stuff out.

**Jessica Dvoretz:** Okay. So, if we can turn another draft of this, not the final draft, but another draft incorporating feedback in the next couple days,

**Rebecca Lyus:** Yeah.

**00:41:04**

**Jessica Dvoretz:** then we could probably write questions that put to the form. Um, sorry, that foot to the article and today's conversation and put those in the channel to be finalized before next Tuesday.

**Rebecca Lyus:** Yes.

**Jessica Dvoretz:** And should we take a first shot at those questions?

**Rebecca Lyus:** Yes.

**Jessica Dvoretz:** Okay, I will confess to having a background in consumer insights and mark and survey writing, so I can take a

**Rebecca Lyus:** Oh, fantastic.

**Jennifer Wright:** Um,

**Rebecca Lyus:** Well,

**Jennifer Wright:** I'm just working I'm working on a second pass, but then Jessica, if you want to take it and run with it with your background, I'm all for that.

**Jessica Dvoretz:** uh you can feel free and then I can jump in. You want maybe we'll work offline.

**Jennifer Wright:** Yeah,

**Rebecca Lyus:** second

**Jennifer Wright:** I'm I'm just working on the last two questions and I'll post uh kind of what I was working on.

**Rebecca Lyus:** Yeah, I will give marketing the heads up that we're going to do Yes. So they don't hate me.

**Petro Vaxevanakis:** And do we need to also discuss how we're going to tie it with the governance piece of work that uh is happening with the same group here or is it clear for everyone?

**00:42:15**

**Everett Zufelt:** I well I can articulate what I think and then we can all have Sure.

**Rebecca Lyus:** Yeah.

**Everett Zufelt:** um two very distinct paths, right? I think this path that we've been talking about is what is this good for? What is the tension you're facing? What do you need to know? How are you business user going to think about growing and expanding these technologies through your business with all of the optimism and barriers that you're going to face? The governance and assurance path is given you like everybody else in the world decide you are going to bring agents into your business. How do you make sure that your whole business doesn't blow up when one of them starts attacking you? So I think they're very distinct, right? One is about security and safety and governance and the other one's about how do we even start to wrap our heads around this whole new world and what does it mean and and how do we get value from it?

**Jessica Dvoretz:** I agree. However, I think one of the clear implications and takeaways is that we need governance.

**00:43:20**

**Everett Zufelt:** Yes,

**Petro Vaxevanakis:** Yes.

**Everett Zufelt:** absolutely.

**Jessica Dvoretz:** So I So I think they work together.

**Everett Zufelt:** Absolut absolutely refer to this other document for how to do that.

**Jessica Dvoretz:** Correct.

**Everett Zufelt:** Yes.

**Jessica Dvoretz:** Like that was the idea.

**Tim Fernihough:** I think

**Everett Zufelt:** Yeah.

**Jessica Dvoretz:** We're not going deep on governance,

**Everett Zufelt:** Absolutely.

**Jessica Dvoretz:** but I think for the layman, this is like why you need governance 101 as a business.

**Tim Fernihough:** and I I also

**Petro Vaxevanakis:** And this is not added well right now. That's like this will need to be a clear addition like either it links or it's a question that leads like it we need to tie it in.

**Everett Zufelt:** Yeah,

**Petro Vaxevanakis:** That's why I also asked the question but it

**Everett Zufelt:** that makes sense. Yeah.

**Tim Fernihough:** I I know we all here know that agents are happening whether you're aware of it or not. But we're writing an article to people where it's like hey here's how you wrap your head around it. But you better start thinking about governance maybe in parallel or trying to under like build an understanding of both because you have risk now and we're trying to help you understand what that risk looks like in a way but you have to wrap your head around it to understand in a way the governance

**00:44:21**

**Tim Fernihough:** right.

**Petro Vaxevanakis:** Yeah,

**Tim Fernihough:** It's like you don't know what you don't

**Petro Vaxevanakis:** I think that I think that what I was seeing from the article that everything else can stem from is so very correctly like we're we're we're saying the the logical thing that agents are all over the place. we're saying that this is working like like possibly companies are moving fast or whatever then we're saying why it stops working and this is where I think something like governance would come in so one another one is like for example Oh, the like pricing and packaging and uh equally um RFPs and how you buy and how you assess. Uh another one would be on the exposure for example it could be governance. I think that it would fit somewhere here and possibly we haven't articulated but I feel that all of these things would stem from here. Any any other article or report however we want to position it would stem from what's not working or what's stopping it what's blocking it or what's confusing us. We need to find the right words.

**00:45:35**

**Jessica Dvoretz:** It's almost like if we get to the point that these five plus five I'm just picking a number out five articles become a report. This is almost like the introduction to the report and governance is one of the key content portions of the report.

**Everett Zufelt:** I agree. Yep. And this week we will because we did merge the draft governance framework and it's called draft because there will be lots of improvements over time. Um because we did merge that today we will do an article just saying hey we have this now go take a look at it um this week. Uh and I think that's scheduled this week. Um, and so yeah, I think I think you're right though. Once we have our five or six or whatever it is articles over the course of the next couple of months, they can then quite easily be turned into uh I literally did this a couple months ago for the architecture group. A bunch of people wrote some really good thoughtful content about what are the different what the different architecture models are.

**00:46:33**

**Everett Zufelt:** And I'm like, huh, dear Claude, look at all this content and turn it into an ebook. And so I think you're right. I think it it all is gonna it will likely all eventually become an ice artifact.

**Jessica Dvoretz:** So I think what we're saying is right now we're happy for these to go in parallel. Um and kind of as content is ready we believe we should um push it out. innovation over um tight controls and kind of when we get enough out there, we'll bring it all together. Is that correct?

**Everett Zufelt:** I think I think so.

**Jessica Dvoretz:** Great.

**Everett Zufelt:** Although I will say I'm highly biased toward action. So I'm happy for other people to slow me down.

**Jessica Dvoretz:** I think we should um I think we should go I think there's a um just a moment where people are hungry for information and we should put it out there and that also gives us the opportunity to create some content that um brings it together which is in some ways easier than making new content all the time.

**00:48:02**

**Jessica Dvoretz:** But it's not the pure funnel Petra. So as our product marketer, please tell us if you think we're missing a marketing opportunity.

**Petro Vaxevanakis:** I think it's great. I love the I love thinking in a funnel, but uh it's not always a a funnel. Like I think I think the what we are all agreeing is that it's a it's a series and that's what's important and then it will hopefully be um organically shaped by the responses and also by the uh topics that we are putting there in an unbiased way like because we are generally want to create something interesting. Um a funnel usually is also I guess you're trying to lead someone somewhere whereas we are trying to explore something. So, um, if I think if we're all agreeing that it's a it's a series, then it's going to organically handle on its own and then involve the people. I think that's that's

the most I think that's going to be the this is a success ingredient to me like involve the people and make sure that we are gathering input as we as we move.

**00:49:15**

**Petro Vaxevanakis:** Um,

**Jessica Dvoretz:** Right.

**Rebecca Lyus:** It sounds like we have a plan.

**Jessica Dvoretz:** It's exciting.

**Rebecca Lyus:** So, did we want to take the last 10 minutes some time back or

**Jessica Dvoretz:** Well,

**Rebecca Lyus:** discuss

**Jessica Dvoretz:** could Ryan and Everett have a request or an agenda item that we're now giving them 10 minutes for?

**Everett Zufelt:** I I don't think we need to go very deep into it, Ryan. I'm not sure what your thoughts are or Tim because you we walked through it on the weekend as well. is we've been working for a little while on this framework and quite frankly none of us knows if it's really exactly the right thing. What it does do is uh you know I was saying to Tim on the weekend what it does do is going through this framework and and it's about hey if we're going to launch an agent in a company how do we make sure that agent is safe as a company by and large the goal of the framework is to force people to think through all of the questions they should think about.

**00:50:24**

**Everett Zufelt:** At the end of the day, you can say no, no, no, no, no, no, no, no, no to all of the questions. All All we're trying to a we would prefer people say yes, let's make our agents safe. But if they're going to choose to launch not safe agents, we really just

want them to understand how unsafe they are and have some human being take accountability for that choice. And that's really what the framework is. So across many many dimensions that are frankly are somewhat boring even as somebody who worked on it. um across many many dimensions. We really just want somebody to take accountability for how safe or unsafe is this agent you're launching. So, it's merged into GitHub for anybody who's super excited about reading through pages of technical governance material. But, and then if you're not excited about that, uh later this week, we're going to launch the article that talks about it at a high level. So, I'm not sure if anybody has thoughts or feedback or if Ryan or Tim you want to share any thing, but I mean it's a pretty dense technical artifact.

**00:51:28**

**Tim Fernihough:** Yeah,

**Everett Zufelt:** It does have spreadsheets though.

**Tim Fernihough:** I mean in one sentence in one sentence it's a documentation

**Everett Zufelt:** People love spreadsheets.

**Tim Fernihough:** of risk acceptance and current state and like what you have done or not done. So like if nothing else, someone can go through there and say, "No, no, no, we don't do this." But then at least they know where they are. And that kind of aligns with our level zero through level three, right? Like we were originally level one to three.

**Petro Vaxevanakis:** Head.

**Tim Fernihough:** And you'd hope level one is like the minimum, but the the fact is in this world, level zero is the because like there are external influences here, right? You we're doing our best, but like agents will exist and you will have risk. So, it's best to know what you're dealing with. And even if it's a well, this is where we are. Let's get to where we want to be. Um, you can still have some like proof of awareness even if you've done nothing except go through the spreadsheet and identify where you are.

**00:52:22**

**Tim Fernihough:** So anyways, those are my thoughts for the moment.

**Ryan Lunka:** Yeah, I mean I like Git because and I think this is something we should lean into. It is a lighter weight framework for governance than you would typically find. um compared to like a NIST framework or something like that which if you're just trying to get your head around any of this opening up an 80page NIST document and being like oh this is how I'm supposed to do this responsibly is just overwhelming

**Tim Fernihough:** You won't even

**Ryan Lunka:** and like maybe you would do eventually mature there but like yeah it's just like it's like mind-numbing to even start um or you have to have resources for people who are like expert in applying frameworks like that and not every company has that and so I like it that it's like a while incomplete a um a good responsible starting place um that is compatible with those other bigger ones. Um and I am going to kind of beta test the agent design document to start with because I have an internal project I can use for that and then um as much as possible I'll try to exercise the other stuff as it applies so we have a a more hands-on set of feedback for how well it works or where there's maybe gaps or something.

**00:53:30**

**Tim Fernihough:** Thanks, Ryan. I think I'm going to do the same, although I am biased because of course I've did a review pass on it, but um we have a number of uh agents that I'm going to put through this framework as well. And um it's going to result in probably some tweaks, I would think.

**Ryan Lunka:** Yeah, reviewing Claude's output.

**Tim Fernihough:** Well, that that was a very specific topic of conversation with Everett and I was like talking about bias. this and like you know using multiple tools to you know assess the output but

**Ryan Lunka:** Yeah.

**Tim Fernihough:** yeah I think we'll basically take my feedback and your feedback from maybe a real life application and then report back on the adjustments that it resulted in. Seems like a reasonable next step to me.

**Ryan Lunka:** Damn.

**Tim Fernihough:** Look at that. We did 10 minutes of work in 4 minutes.

**Jessica Dvoretz:** You guys are very impressive.

**Ryan Lunka:** And thus wraps the exciting topic of governance for today.

**Tim Fernihough:** Yeah. Well, I mean, I'll share an anecdote then so everybody can appreciate it.

**00:54:45**

**Tim Fernihough:** As Everett and I were going through all of this on the weekend, we talked about a number of like add-ons even to simple things like cloud code. And I was like, "What? Cloud and Chrome is on. Bypass permissions mode is on. I thought these were off." and I turned them off and it took all of I think one hour on Monday morning for people to say where'd this thing go and now all these things are broken and you know maybe that you know at the top of our AI tools policy I have a little quote that says um you know if you wouldn't talk to a stranger in a bar about this thing you need an NDA and you know I I wonder if you know a simple humorous but like uh what's like epiphany creating quote is the kind of thing we'd want in a in a thing to get people as excited as they can about this kind of topic when they get a newsletter or a survey. Like you don't want to scare people into action, but um at the same time there's probably a way to make light of it because people are going to be scared anyway.

**Everett Zufelt:** All righty. Sounds like we're making progress.

**Jessica Dvoretz:** Yes. All right. Uh I will have some stuff in the channel in the Slack channel later this week.

**Rebecca Lyus:** Exciting,

**Everett Zufelt:** Lovely. All right. Thanks everyone.

**Rebecca Lyus:** right?

**Jennifer Wright:** I have.

**Petro Vaxevanakis:** Bye everyone.

**Tim Fernihough:** morning. Bye-bye.
