Strategy session evaluated white paper scope and resulted in adopting a multi-part content publication plan.

White Paper Development Strategy

- Decided to transition the white paper from a single, dense document into a multi-part series to improve clarity and readability.
- Defined the target audience as mid-market to enterprise-level digital leaders with sufficient technical fluency to navigate organizational complexities.
- Jessica and Petro proposed framing the first article as a provocative thought piece on unknown agent proliferation, rather than a technical manual.
- Agreed that subsequent articles will cover governance and tokenomics, using the initial piece as an umbrella to set up the series.
- Confirmed the scope encompasses the entire organization's AI adoption, rather than limiting the focus to software development teams.

Research and Data Collection Plan

- Initiated a plan to utilize the upcoming Amsterdam event to collect first-party survey data, ensuring content is validated by external findings.
- Set a goal to deploy survey and teaser content prior to the Amsterdam event, allowing the team to merge data on or after the October 13 meeting.

- Defined survey focus areas to include organizational maturity levels and priority ranking regarding agentic systems.

Next steps

- ☐ [Rebecca Lyus] Update Slack Channel: Summarize the white paper discussion, including progress on the 3 questions, for the wider group in the Slack channel.
- ☐ [Rebecca Lyus] Secure Survey Budget: Procure funding for physical signage featuring a QR code for the survey at the Amsterdam event.
- ☐ [The group] Define Survey Questions: Establish a list of questions to gauge organizational maturity and priorities regarding AI and agentic systems.
- ☐ [Rebecca Lyus] Create Survey: Build the survey using the finalized set of questions.
- ☐ [Rebecca Lyus] Update GitHub notes: Draft a summary using the meeting notes and upload the final document to the GitHub repository.
- ☐ [Rebecca Lyus] Send follow up: Compile and distribute a follow up message containing all discussed tasks broken down for the team.
- ☐ [The group] Define survey questions: Collaborate over the next 2 weeks to decide on the specific content and questions for the survey.
- ☐ [Petro Vaxevanakis, Jessica Dvoretz] Draft article: Develop the short provocative piece that serves as a hook for the upcoming project.
- ☐ [Rebecca Lyus] Notify regarding updates: Send a notification to the team once the GitHub repository has been updated with the latest notes.

Summary

Strategy session evaluated white paper scope and resulted in adopting a multi-part content publication plan.

White Paper Strategy Evaluation

Discussions identified that the initial draft was too broad and required simplification. The team decided to adopt a multi-part series strategy instead of publishing 1 comprehensive document.

Refining Content and Audience

Participants reached consensus that the paper should target Chief Information Officer leaders while addressing visibility and failure modes of agentic systems. Broadening the scope to include organization wide impacts was deemed essential.

Leveraging Event for Data

Upcoming conference data collection was prioritized to ground hypotheses. Establishing baseline industry metrics through surveys became a key objective.

Decisions

Aligned

- **Multi-part white paper series strategy adopted** The team decided to restructure the white paper content into a multi-part series, beginning with a short, provocative piece that introduces the topic and tees up subsequent deep dives into governance and ROI.
- **Organizational scope confirmed for white paper** The project scope is finalized to address agentic system impact across the entire organization, rather than being limited solely to software development functions.
- **First-party survey data collection strategy approved** The team decided to implement a first-party survey to collect data from the community, which will serve as both a teaser and a foundational mechanism for developing future content.

Next steps

- ☐ [Rebecca Lyus] Update Slack Channel: Summarize the white paper discussion, including progress on the 3 questions, for the wider group in the Slack channel.
- ☐ [Rebecca Lyus] Secure Survey Budget: Procure funding for physical signage featuring a QR code for the survey at the Amsterdam event.
- ☐ [The group] Define Survey Questions: Establish a list of questions to gauge organizational maturity and priorities regarding AI and agentic systems.
- ☐ [Rebecca Lyus] Create Survey: Build the survey using the finalized set of questions.
- ☐ [Rebecca Lyus] Update GitHub notes: Draft a summary using the meeting notes and upload the final document to the GitHub repository.
- ☐ [Rebecca Lyus] Send follow up: Compile and distribute a follow up message containing all discussed tasks broken down for the team.
- ☐ [The group] Define survey questions: Collaborate over the next 2 weeks to decide on the specific content and questions for the survey.
- ☐ [Petro Vaxevanakis, Jessica Dvoretz] Draft article: Develop the short provocative piece that serves as a hook for the upcoming project.
- ☐ [Rebecca Lyus] Notify regarding updates: Send a notification to the team once the GitHub repository has been updated with the latest notes.

Details

- **Introduction and Context Setting:** Rebecca Lyus opened the meeting, acknowledging staff absences and weather-related disruptions ([00:00:07](#)). The group prepared to discuss Everett's white paper, with Rebecca Lyus providing a link to the document for the participants to review ([00:02:39](#)).
- **Structure and Scope of the White Paper:** The group debated whether the white paper should remain a single comprehensive document or be divided into a series of smaller, more consumable pieces ([00:04:02](#)). Petro Vaxevanakis advised that the current draft contained too many concepts, suggesting that

the team simplify the messaging or split it into distinct segments to better target a specific Chief Information Officer audience ([00:07:04](#)).

- **Defining the Target Audience:** Dylan Valade identified the target audience as leaders within mid-market e-commerce or retail businesses who operate at an enterprise level. These individuals are expected to be sufficiently technical to grasp the concepts but require guidance to support their leadership and management teams in making informed decisions ([00:09:38](#)).
- **Addressing Content Ambiguity:** Jessica Dvoretz expressed confusion regarding the specific recommendations within the draft, noting that it currently touches on governance topics being addressed in a separate piece by Ryan and Everett. Rebecca Lyus confirmed the team is trying to avoid overlapping with that separate governance project ([00:12:21](#)).
- **Framing the Core Problem: Agent Visibility:** Petro Vaxevanakis and Jessica Dvoretz proposed reframing the paper to address the ambiguity surrounding the number of agents within an organization. They suggested a provocative approach that highlights the issue of business leaders lacking visibility into how many agents exist, their costs, and their operational value ([00:13:39](#)).
- **Developing a Multi-Part Content Strategy:** The group agreed to use the current draft as the first, top-of-funnel piece in a series ([00:16:24](#)) ([00:22:30](#)). This first article will set up subsequent, more technical papers focusing on specific downstream issues like tokenomics, return on investment, and governance ([00:18:51](#)) ([00:22:30](#)). This approach allows the team to ship high-quality content faster without waiting months to develop a single, long-form document ([00:23:42](#)).
- **Addressing Skepticism and Failure Modes:** The team discussed including a section on how agentic systems fail to better address the concerns of skeptics ([00:27:39](#)). Petro Vaxevanakis emphasized that the paper should acknowledge both sides of the argument—the potential benefits and the risks—to remain objective, as the current draft lacks supporting data ([00:28:57](#)).
- **Scope of Organizational Impact:** The group debated whether the paper should focus solely on software engineering or the entire organization. While Dylan Valade argued that existing research from software engineering and development operations provides a valuable foundation, Jessica Dvoretz and

Petro Vaxevanakis highlighted that the widespread adoption of AI tools by non-technical departments necessitates an organization-wide scope ([00:30:10](#)).

- **Leveraging the Amsterdam Event for Data Collection:** To avoid publishing content that might be perceived as lacking depth, the team planned to use the upcoming event in Amsterdam to gather primary data ([00:37:43](#)). Rebecca Lyus proposed creating a survey with a QR code, which would allow the group to collect real-time insights from industry participants and ground their hypotheses in actual data ([00:43:58](#)).
- **Publishing and Survey Strategy:** The team agreed to prepare a teaser and survey before the Amsterdam conference to maximize engagement ([00:47:40](#)) ([00:54:14](#)). Rebecca Lyus committed to managing the survey creation and coordinating with the marketing team to ensure a cohesive release plan ([00:46:38](#)) ([00:49:02](#)).
- **Survey Content and Maturity Metrics:** Dylan Valade and Jessica Dvoretz outlined potential survey questions, such as assessing the maturity level of an organization's artificial intelligence adoption—moving from pilot experimentation to enterprise-scale deployment. They also suggested questions regarding confidence in data control, licensing awareness, and policy alignment to help establish a baseline for the industry ([00:50:08](#)).
- **Next Steps and Task Delegation:** The team finalized a plan to produce three main deliverables: a provocative teaser, a short first article, and the survey ([00:54:14](#)). Petro Vaxevanakis and Jessica Dvoretz volunteered to partner on drafting the first article, with Rebecca Lyus organizing the follow-up details and updating the group's project documentation on GitHub ([00:57:30](#)).

00:00:07

Rebecca Lyus: Hello.

Liban Mohamud: Hello. Hi. Rebecca, how are you living here?

Rebecca Lyus: Not too bad. Thank you. And yourself.

Liban Mohamud: Ah, not too bad at all. Not too bad.

Rebecca Lyus: Sorry, I'm just trying to wrap things up quickly before I call. No, it looks like we have quite a few people off ill today.

Liban Mohamud: Yeah, it's summer just trying, you know, finishing up. So, everybody's kind of either off or just getting back in.

Rebecca Lyus: This is it. And with the the change in weather as well, I don't think cuz over in England we've had some quite drastic changes. Gets hot. We then have thunderstorms. Can't make a left or right of it.

Dylan Valade: Hello. Hello.

Rebecca Lyus: Hello.

Dylan Valade: A little stormy over there,

Rebecca Lyus: Yeah, we've had proper thunderstorms.

Dylan Valade: Rebecca.

Rebecca Lyus: Um like complete flash ones as well. So, we've had it's been sunny. We've had the window open. and the storm.

00:02:39

Rebecca Lyus: It's been

Dylan Valade: Good.

Rebecca Lyus: intense.

Dylan Valade: I just read that we had uh the most thunderstorms on record or tornadoes on record in our area.

Rebecca Lyus: O

Dylan Valade: That's um we had told our kids when we moved from Germany back to the US to Illinois that there weren't any weather things to be concerned about really worried about hurricanes. Like, no, there's nothing. It's been non-stop

Rebecca Lyus: Oh god.

Dylan Valade: tornadoes.

Rebecca Lyus: I had a couple of friends who were camping this weekend and they just kept having flash thunderstorms.

Dylan Valade: That's the worst. I'm going next weekend. Fingers crossed.

Rebecca Lyus: Hopefully it'll be good weather. I'm just going to give it two more minutes for people to trickle in and then we'll probably pop on to uh Everett's post about the white paper. So, if anyone needs to refresh themselves, this is your time. This is your two-minut

Dylan Valade: Thank

Rebecca Lyus: warning.

Dylan Valade: you.

Petro Vaxevanakis: That's

Rebecca Lyus: I am also going to put a link in the chat for e for people to go to the white

00:04:02

Petro Vaxevanakis: it.

Rebecca Lyus: paper.

Dylan Valade: I'm just using Slack.

Rebecca Lyus: There we go.

Dylan Valade: Thank you.

Jessica Dvoretz: Thank you. I am turning my brain back on after vacation, so everything's taking twice as long.

Rebecca Lyus: I feel that I can see that Ryan and Tomasz have put in a few comments.

Jessica Dvoretz: There it is.

Rebecca Lyus: Just going to copy Everett's questions as well, so I don't need to Okay. flipping and for back and forth between slacks. There we go. So first point, how many papers is this? So everyone has split it down into four ways. Uh did we want this to be one big um piece? Do we want to split it in two? Make it a two-part or do we think it needs to be in four pieces? So, uh why you should invest the tool, where to impose next, how to run it once it's live, and how to prove it worked. Cuz we have the option of making it incremental. So, doing okay, phase one, let's just do the first article, then next, then the next and the next.

00:07:04

Rebecca Lyus: Or we can try and fit it into one big piece. Or if we think four's too many, one is too short, go somewhere in the middle,

Dylan Valade: Thanks.

Rebecca Lyus: split it into two. What people's thoughts?

Dylan Valade: The full thing is a lot for anybody can to consume in this day and age. Uh but Petro

Rebecca Lyus: Yeah.

Petro Vaxevanakis: I'm a bit new to the thread. Um I told um Everett on the call as well that my my core is product marketing which means making complex things simple. So with that lens, when I read the paper, I felt that there are way too many concepts in there and I think that unless we were extremely specific on one direction and we could target a very specific CIO, it would make sense to keep it that long. But right now, I think there's way too many concepts in here to keep it that long. And it could be for any CIO, but I think that we need to be more specific if we want it to be so long.

00:08:25

Petro Vaxevanakis: Or else we should break it down and then try to make it a bit more problem agnostic.

Dylan Valade: Petro, are there any specific I agree with you first of all. Are there any specifics that you think are worth diving into?

Petro Vaxevanakis: Again, it really it really depends on the on the on the on the on the person that we want to target. I don't I don't know also. um haven't seen in the docu like the size of companies that this is going to be addressing to how technical this person will be. So I'd say that there is many interesting concepts. I think some are more philosophical, some are more practical. So would really depend. I would be able to respond based on exactly who do we want to target to and then most likely break it into pieces and provide the right one to the right person.

Dylan Valade: Um,

Petro Vaxevanakis: I think usually like in the because you you mentioned that in today's age is too long

Dylan Valade: the I would say that

Petro Vaxevanakis: content.

00:09:38

Petro Vaxevanakis: I think if it's some if if something is very very good no matter how lengthy it is. It doesn't matter. But it has to be diving really deep into a specific

Dylan Valade: That's a good point. Um, okay. So then the audience the type of company is I think we say a mid-market e-commerce or retail focused

Jessica Dvoretz: Awkward.

Dylan Valade: business and they have enough complexity in their organization that they're already kind of in the mock alliance sphere of influence and that's not just your average small business you know that's popping up on Shopify. Uh so they're going to be operating at an enterprise level and then likely a digital leader whether they are on the technology side or the commercial side. uh they're going to be somebody who's I would say pretty fluent in the types of things that we talk about here and but also looking to level up their understanding so that when they go to help their management team and leadership make decisions that they're more informed and they're able to help guide.

00:11:00

Dylan Valade: Uh, so they're kind of a trusted leader whatever transformation's ongoing and they're going to be technical enough that I think they could either understand what we're saying here or get their head around it pretty quickly.

Rebecca Lyus: feel like that's a good target. Like semi-technical enough to get what's going on kind of. Okay.

Jessica Dvoretz: Um, so I guess I'm, you know, I was out last week, so I wasn't involved in as much of the iteration. Um, and I I guess I would I agree with Petra that there's a lot here and I'm still a little lost at what we're recommending. And maybe that's because there's so much here.

Rebecca Lyus: Yeah.

Jessica Dvoretz: Um, but I get the thesis and I like the thesis. Um, you know, there's all this agenic development happening. You know, it used to be that rollouts were centralized. Um, these in our new world, it's kind of happening anyway, every way. You have to get your hands around this or the organization needs to get its hands around it.

00:12:21

Jessica Dvoretz: what it feels like we're recommending like a whole bunch of things based on some are governance, some are not. I guess that's where I'm a little lost and maybe that's where it breaks down into just saying there are like five things you have to do to get your arms around this and then we tackle them in subsequent pieces.

Rebecca Lyus: So, I believe Ryan and Evra are currently writing a piece on governance. So, we're not wanting to overlap with that,

Jessica Dvoretz: Okay.

Rebecca Lyus: which I think's some of the confusion as well because this does, like you say, touch on some governance

Jessica Dvoretz: I mean,

Rebecca Lyus: topics.

Jessica Dvoretz: because it seems like this there's a lot of governance. Like saying governance in this would make a lot of the things clearer, but maybe you're right. We're dancing around not saying governance. And so I don't actually understand what we're recommending if I'm totally honest.

Rebecca Lyus: That is fair.

Dylan Valade: That is definitely

Rebecca Lyus: And if we aren't certain,

Dylan Valade: fair.

Rebecca Lyus: how do we then get that point across?

00:13:39

Rebecca Lyus: So, I feel like it'd be really beneficial if in this call we can then make a decision on what we're certain on, which between four of us will dictate what the others are doing.

Dylan Valade: It must be present to win.

Rebecca Lyus: Then

Dylan Valade: Petro

Petro Vaxevanakis: One thing that has really gotten my attention and possibly I was away on the first meetings that you folks were discussing is is we are really talking about the number of agents. Um our previous years probably were talking about the number of workflows and at the time we're saying do we know all these automated workflows? Do they exist somewhere? I think what I were going towards governance here is because we are framing this which could be a problem like the number of agents. Do you know how much they cost? Do you know how much things they do?

Dylan Valade: Okay.

Petro Vaxevanakis: Do they all add value? Are they all um operating under our security? Um so I I think that if we if we do start with that like the number of agents and we make it a topic then I think we need to be again if in. But we can break it into pieces and then talk about the different things there.

00:15:03

Petro Vaxevanakis: So who owns them? How much do they cost? Um and all these things or where are they pulling from? But I I for me like the when I'm reading the whole thing the one thing that gets my attention either positively or negatively is that we are framing there are numerous agents in your business and you don't know

Jessica Dvoretz: I agree that's what jumps and I think um you could write this as

Petro Vaxevanakis: things.

Rebecca Lyus: Yeah.

Jessica Dvoretz: like a pro just a provocative memo that basically makes that point that says in the past you know things rolled out

Rebecca Lyus: Are

Jessica Dvoretz: centrally um in the agenic world when people outside the technology team have access to claude or you know other other um models. um they may be building agents that you don't know like do you even know where and how agenic is being used in your organization and what this could mean like here are steps to take to answer this question which then I think actually te's up the second article on

Petro Vaxevanakis: And I

00:16:24

Jessica Dvoretz: governance that potentially I don't know what they're writing but potentially that could then tee up the governance art uh article that's being written separately.

Petro Vaxevanakis: I think the beauty with this is that we can also create two sides which is like the one side is do you need to care about how many agents there are or do you just care about the value in the business and then the other side is you should care because things will go out out of control. This is where we stick on the lower down the funnel governance paper. So this is like more top of funnel and then from that side you go on governance and then we would need to stick also something on the other side which is more like value based and over there we can also talk about pricing. We can talk a lot about things that it's more about the the value in the business. So, it's more like before you needed a process optimization team to handle all of your workflows. Like people couldn't just create workflows uh with uh uh um with Power Automate or whatever.

00:17:31

Petro Vaxevanakis: But now with agents and clothing, whatnot, everybody can build things. how much should you care like what is the layer that you you should care so to protect things and then how much you should focus on the benefits. So I think it kind of like splits this

Jessica Dvoretz: I mean, I like that.

Petro Vaxevanakis: nicely.

Jessica Dvoretz: Or you could say, is this good or bad? And then maybe we could conclude it,

Petro Vaxevanakis: Yeah.

Jessica Dvoretz: you know, it's both.

Petro Vaxevanakis: Yes. Simple as

Jessica Dvoretz: So,

Petro Vaxevanakis: that.

Jessica Dvoretz: here's what you what we believe you should

Petro Vaxevanakis: Yeah.

Jessica Dvoretz: do.

Petro Vaxevanakis: I love the simplicity. Yeah.

Jessica Dvoretz: And I think that's a question people are just waking up to be asking. So I think it's very timely

Rebecca Lyus: cuz I know in one of our earlier conversations around cuz the broader topic that we were originally going to discuss was consequential ROI as a umbrella topic. Um and we were then going into the discussion of tokconomics with people aren't certain about how much tokens are being used for things

00:18:51

Jessica Dvoretz: So I agree with you.

Rebecca Lyus: either.

Jessica Dvoretz: I think we've shifted. I I guess I don't to me this paper is not about consequential ROI, but it's a very good paper.

Rebecca Lyus: No,

Jessica Dvoretz: So I guess but and I think token consumption is one of the reasons

Rebecca Lyus: this is it.

Jessica Dvoretz: you need to start caring right like in terms of like is this good or bad in the

Rebecca Lyus: Yes.

Jessica Dvoretz: early stages it was great because you were getting productivity now you're realizing you actually have to care and why are the reasons you have to care tokconomics and then

Rebecca Lyus: Yes.

Jessica Dvoretz: ultimately kind of security and governance well I guess governance the solution is governance but Why do you have to care?

Rebecca Lyus: Yeah.

Jessica Dvoretz: You have to care because of tokconomics. You have to care because these are starting to interact and/or run in silos. Um I'm the least technical person on this call, so someone else should take the more technical pieces. Um why you have to care is um because if because um unless you're um really putting in the semantic context uh these agents are probabilistic.

00:20:01

Jessica Dvoretz: So unless you are doing the right things with your data different agents could be getting different answers. Right? There's like five or six reasons why you should care and then the answer is governance. And how heavy you go into governance probably depends on how concerned you are about each one of these reasons. But I I I don't think this is what we originally said we were going to write. But I think it's a great paper.

Rebecca Lyus: No, I I just wanted to make sure that by the way we were originally discussing this. Are we happy? cuz I am here to help assist and circle us back when need to. But if we also just want to change topics, we can. We We're our own boss in this. We We are managing ourselves. Petro

Petro Vaxevanakis: Again, again coming really late to all this discussion. And we which could potentially be a good thing. I think right now like the whole tokens topic

Rebecca Lyus: Yeah.

Petro Vaxevanakis: is really top of mind for everyone for the CFO, for the CIO, for the CEO, for everyone.

00:21:15

Petro Vaxevanakis: Um, usage based pricing, what does it have to do with value based pricing? all all of these topics right now. Whoever is buying any platform right now, any agentic platform like the sellers are trying to explain how their tokens work and the buyers are trying to understand how they're working. There's these these moments on the calls where the both parts are laughing because nobody knows exactly what's happening. This is this is the reality like um so I'd say that I love more your first direction that you had but I do agree that what you already have here is really good content. Um yeah coming late I would say that I'd love to see it going more towards the talking site.

Rebecca Lyus: I mean, we could also cuz we have the option to do we just want to use this as a stepping stone for the consequential ROI because that feels like it makes more sense because what Jessica was saying is like we talk about this white paper, then we go on to governance, then we go on And it feels like a nice journey of a series of what we're discussing.

00:22:30

Jessica Dvoretz: So I think this could be used to set up tokcono to tokconomics because tokcono token cost is the number one reason you should care what people are doing with agents in your organization. I mean, I guess we could debate security versus cost, but the the topic dour that has sprung up, I don't maybe the security risks

haven't made the press to the same degree, um, is token usage. If you don't know what people are building and running every day, and autonomous agents consume more tokens than qu than one-off queries. Um,

Rebecca Lyus: Yeah.

Jessica Dvoretz: so I think you could use this to tee up the number one reason why you care. I mean, the reasons you care are cost, security, and reliability or something like that. And you could use cost to to tee up h then the next step is how do you understand which of the agents that exist are generating ROI. um which I think would be very valuable to pe to organizations.

Dylan Valade: And then we're back to the beginning. It's very

Jessica Dvoretz: Yeah,

00:23:42

Dylan Valade: cyclical.

Jessica Dvoretz: I think we potentially just insert this ahead of where we said we want to be in part because it's

Rebecca Lyus: Yeah.

Jessica Dvoretz: written.

Rebecca Lyus: And that's also okay. It's it's

Jessica Dvoretz: But if there are multiple papers coming from our working group and we know that um Everett and Ryan are off to the races on the governance one. I think we could use this to Petro's point as the umbrella to set up this like provocative question that you don't actually know what's going on.

Rebecca Lyus: Yes.

Jessica Dvoretz: And so like what are the implications of that? There's one on cost, there's one on governance, right? And then we could kind of write those two papers and very fast follow

Rebecca Lyus: Yeah. Don, how are you feeling about this?

Dylan Valade: I think in the the spirit of being a good delivery org,

Rebecca Lyus: Cuz

Dylan Valade: you want to ship often with high quality and don't overdo it. So, if we've got content that's ready to roll,

Rebecca Lyus: Yeah.

Dylan Valade: send it, see if people read it, rather than wait three months to develop something long form that doesn't land um or just we didn't get enough feedback early enough to make it that valuable.

00:25:04

Rebecca Lyus: So since we have the shape for this, we will come back to tokconomics. It may be after MACH. That's okay. Um, this isn't a rushed project. This is a working group we're developing as a whole. So, bringing back cuz I know you said, Dylan, that you're worried about it being

Jessica Dvoretz: I think to answer the questions Everett posed, I think that this is a multi-series,

Rebecca Lyus: Yes.

Jessica Dvoretz: right? This is not there's too much in this document.

Rebecca Lyus: too much.

Jessica Dvoretz: Uh we would like to strip it down to exploring kind of the provocative question. um spending a little bit time on why this is a good thing.

Rebecca Lyus: Yep.

Jessica Dvoretz: um or why in early stages this is a good thing and why as you know agenic matures you do need to care and then teeing up the reasons you need to care are cost the the costs to the organization and ensuring you have an ROI

Rebecca Lyus: Yeah.

Jessica Dvoretz: governance um and I mean maybe just teeing up those two subsequent articles that come Next.

00:26:19

Rebecca Lyus: Yeah. Okay. So, I feel and you can disagree with me cuz this is just my personal opinion that we kind of go with the flow once we start writing it to how many we have. So, we've got four topics. see what how they work together rather than trying to force them either to be the four topics split out together how it works together. Does that make sense or am I kind of going off on a weird direction.

Dylan Valade: It is hard to just to do this in general mind meld

Rebecca Lyus: Yeah.

Dylan Valade: everybody and um so breaking it down into smaller pieces is good. So if we're we're going to say these are where we we're already we said taking

Rebecca Lyus: Okay.

Dylan Valade: shape. Let's lean into those and then um if we've got a pattern for getting through to these things being published that would be great. Then we can open the aperture and do a bit

Rebecca Lyus: Okay, I feel like that's question one covered if everyone is

Dylan Valade: more.

00:27:39

Rebecca Lyus: happy. Uh, question two, do we say how these systems fail? So has basically said skeptics come up a few times in the brief always as something to manage. We never say how agentic software actually goes wrong. A leader who can't answer a skeptic gets people nodding along instead of getting on board. Add a section on how this fails. So, are we wanting to have that negative element and go cuz you were saying Jessica about making it very um honest, showing these things uh with a grabby title to that they don't actually know.

Jessica Dvoretz: I think we're actually forking based on Pedro uh pro's input which I think is really good and and actually saying making an argument for why for is this good or is this bad which isn't where where this paper started,

Rebecca Lyus: So we can

Jessica Dvoretz: but I really like

Rebecca Lyus: Yeah,

Jessica Dvoretz: it.

Rebecca Lyus: I feel like splitting it up works. Okay. So, we can kind of

Jessica Dvoretz: What do you since I just put words in your mouth, Petro?

00:28:57

Jessica Dvoretz: What do you

Dylan Valade: How it fails.

Jessica Dvoretz: think?

Petro Vaxevanakis: I when I when I read the paper,

Rebecca Lyus: both

Petro Vaxevanakis: one thing that I felt is that we're giving so much advice and we don't have any data in there like there's no data in this. starting and kind of like keeping it a little bit more that there is actually two sides before we even provide our recommendations as MACH community. I think it's yeah I I think that it's it's also more legitimate in a sense that we are we're we're not going to go and patronize people like unless we unless we did have data in there. Um so I think that people will relate more uh they will also be able to take their side what do they

Rebecca Lyus: Huh?

Petro Vaxevanakis: prefer um and then with a progressive disclosure of the content also end up to the potential advice that we're giving.

Rebecca Lyus: Huh? Right. I feel like we've wrapped up that one quite nicely. based on our initial conversation. Um, and his final question is software development one example or the core.

00:30:10

Rebecca Lyus: I believe we agreed on our last call that the scope is the whole organization not just the software function but most of our examples are still developer examples and the door material only covers software teams.

Jessica Dvoretz: So I think in this new framing that is no longer an issue because we're

Rebecca Lyus: Yeah.

Jessica Dvoretz: no longer longer talking about consequential ROI specifically. We're talking about getting your arms around a

Rebecca Lyus: Yeah.

Jessica Dvoretz: generic in your organization which is should be beyond software.

Rebecca Lyus: Okay.

Dylan Valade: And I will disagree there that it's to run a generic software which is what this is. A lot of the the success or failure will be determined at how well your organization does adopt new technology accepts and trains and builds stakeholder alignment and also how you build coalitions with leadership to support each other's ideas and actually get them not only to the finish line but then supported over the next call it 6 months or 9 months when it really uh becomes the new Okay. So I think that the same muscles that were built building up the developer operations teams, software engineering teams, technology support organizations are going to be the the make or break for companies that are looking to do this.

00:31:44

Dylan Valade: So I think there's as far as the data that we have available at the moment it feels like almost only that that Dora data or aligning to that is what we have available because as you said everything else is so new it's all changing even the vendor doesn't know how to sell their own product or where they've pivoted. So then what what can you ground yourself in? Well, you can look at over a decade of research in enterprises developing and adopting new technologies.

Jessica Dvoretz: Um, that makes sense. I guess I was making a different point which is I think if we're saying you don't understand how many agents are in your organization today the scope has to be the entire organization not just things that people on what have traditionally been called technology teams are creating because that's the biggest change is that someone in marketing is using cloud code not which is today.

Dylan Valade: Okay. Um, so then if we I was not thinking necessarily individual personal enablement. That's a good point.

00:33:09

Dylan Valade: There's then a maybe a separate piece where we're talking about individuals work versus an automated team process. So for example, Salesforce announcing Cloud Force that essentially every data set in your Salesforce environment could now become exposed to agents and agency at the the complete scope of the co company um without anybody asking permission other than whoever was able to sign the deal approved it. Now it's possible. in the hands of everybody. So, but there was like a personal enablement part which is the individual building their own tooling and then there's the the software itself either vended or developed internally that has agency acts autonomously makes decisions and how do you keep your arms around that? I guess I was personally more concerned about that part than the individual building apps for their own productivity.

Petro Vaxevanakis: I I mean I think it's both because the individual also will prompt the Salesforce to get the data that they need and build their their workflows. I think I think I think I think I think again it's like yeah to a it's getting again into a big topic that I think that it could be different sections again um

00:34:47

Jessica Dvoretz: But I think that reinforces you have there's so many ways things you're not thinking

Petro Vaxevanakis: but

Jessica Dvoretz: about. I think what you're saying Petro is both right. So like even in this call we're all going down an in one

Petro Vaxevanakis: Yeah.

Jessica Dvoretz: direction which means that if you're a CEO or COO or a head of AI you need to understand all of these things.

Dylan Valade: Sure. Maybe you need to understand who you need to pass off, delegate these different areas to.

Petro Vaxevanakis: A lot of

Dylan Valade: These are the topics that need somebody to evaluate them.

Petro Vaxevanakis: work.

Dylan Valade: Whether it was on just the quantity of agenic services that your company has or the the depth and complexity or authority that that agent has the at the moment I've got one one project where clients just asking how technically ready are we you know we've got 50 AI initiatives operating at the same time they're deploying as quickly as they can. Are we even set up to run systems like this? We don't know.

00:36:05

Dylan Valade: We just got started and now we're starting to see early success, but we are concerned that we don't know how to to run this now. So that like that emerging maturity if you're already on this um maybe there's a spectrum first we can say we're assuming you're at this point in the spectrum of adoption and quantity of agents and uh systems and maturity but uh it is a bit too wide at the moment too broad um I worry we're not going to be able to make a really salient message.

Rebecca Lyus: Yeah. I'm wondering if it'll be worth us bringing it up to the wider group in the Slack channel. If I I'll basically cover everything that we've discussed this um to basically go we've discussed this question one, question two, we stuck on question

three. What do people think with Oh, I'll I'll use the transcript for what you three have said to get all the points across.

Dylan Valade: So if we didn't worry about crossing every tea and dotting every eye. And Petra and Jessica is the ones that arrived this week.

00:37:43

Dylan Valade: Um, where would you like what would you like to to minimize the scope of the kind of first article for like where would you want to be able to say we have enough information to have a really good point about this? The world would be better off if we share this openly.

Jessica Dvoretz: So based on um kind of the title, the thesis slashhook Um to me this first article theme seems more like a provocative thought piece. So what we're trying to do is help business leaders understand the scope of the challenge, the questions that they should be asked and the questions questions that they should be asking um both about the strategic priorities of their business and kind of the current operations of their business to understand where they are today. Um and then we kind of tee up the reasons for why you should care. Um, and then what you do about those things could come later. It seems to me like what we have in this piece, to your point, Dylan, without a lot of data.

00:39:33

Jessica Dvoretz: Like it's a the framing doesn't necessarily need data. It's the pieces that come after that do. But one could say that's too light and fluffy.

Rebecca Lyus: Is there an issue with light and fluffy though? cuz I don't think it would be too light and fluffy then

Dylan Valade: Petro, is it too light and fluffy?

Petro Vaxevanakis: I think I think that will depend on the delivery the distribution of the content how it's going to be perceived in the sense that for example, and again I'm not 100% sure how we're thinking about audience here, but I understood that this will be delivered after the event in Amsterdam. Like if we use the event in Amsterdam to write a sorter provocative to Jess point, then use Amsterdam to potentially even get some input from the people at the event. and then went into writing the longer format. I think then that's not fluffy because we have started the topic. We've involved some somehow and then we carry on. It can even be like a like a survey that we pull on the screens and we ask people to respond to like it can it doesn't need to be like interviews.

00:41:36

Petro Vaxevanakis: So if we if we if the distribution of the content had like a a way to involve more folks, I think by all means it would not be light and fluffy. Um if we just publish this as it is, I I think that it would need to be a little bit more bucked up.

Dylan Valade: I was just taking some notes that I I could agree with. Um I was just imagining any sort of like blog post teaser that like here's what we're working on. Uh maybe even a call to action if you want to participate. It'll be a survey and we're going to be using the opportunity with several hundred people leading

Petro Vaxevanakis: Yeah.

Dylan Valade: the charge in Amsterdam to uh to finish our research on this topic which is emerging in real time.

Rebecca Lyus: on Amsterdam. Really quickly, are you three going to be attending?

Dylan Valade: I will

Rebecca Lyus: Okay, we've got it done. I'm going to

Jessica Dvoretz: As of now, I'm not It's kind of hard for me to get there. Uh but if it becomes a a big thing for this working group, I can

00:43:00

Dylan Valade: That's

Rebecca Lyus: This is what I'm trying to start gauging as usually the working groups are coming in case we do want to do stuff in person

Jessica Dvoretz: try

Dylan Valade: not

Rebecca Lyus: and getting

Petro Vaxevanakis: Yeah. I'm I'm also staying with Jessica.

Rebecca Lyus: back.

Petro Vaxevanakis: Um, somebody from my team is coming. I was not planning to come. Um, but I'm based in Europe.

Rebecca Lyus: Okay.

Petro Vaxevanakis: For me, I guess it's Jessica, you're in the US, right? Yeah. So, for me, it's it's a little bit easier,

Jessica Dvoretz: Yes.

Petro Vaxevanakis: I guess. Um, so yeah, for me, if we arrange something, it would be much easier.

Rebecca Lyus: Yeah.

Petro Vaxevanakis: However, what I'm suggesting doesn't need us to be there. We can easily write something before and that would be the only basically blocker that we need to write something before the event which is in basically 29 days. Uh and then uh have something to collect input from the people which luckily there's many survey tools that you can just kind of QR

00:43:58

Dylan Valade: Thank

Petro Vaxevanakis: code and get you to the right questions.

Rebecca Lyus: Yes.

Dylan Valade: you.

Petro Vaxevanakis: Like for me like another thing about like white papers or any kind of like written content like or even any type of content I think people really care about how how I built this like how we like even what we're doing now that we're on a call and we're discussing these topics and I think this is quite interesting. So I I do think that it worth like creating some anticipation in Amsterdam which at the same time is an opportunity for us to collect more knowledge from a wider audience and then try to incorporate these and get people to follow our journey. So I think this is a really good opportunity that maybe this is even more important than the paper

Rebecca Lyus: Yeah.

Petro Vaxevanakis: itself.

Jessica Dvoretz: I mean, I like the idea of some sort of survey because a lot I've the a lot of the white papers rely on survey results, right? Like I'm thinking specifically of a lot of things McKenzie publishes um and it's always our survey of CEOs or our survey of um this group of people um revealed that this is top of mind for these people in the organization but not these people or this is something that they this many people anticipate this to be a problem in 0 to 12 months, 13 to 24 months, more than 24 months, right?

00:45:33

Jessica Dvoretz: Like I think that um you know we could definitely survey people on where they are in thinking about these problems or these

Petro Vaxevanakis: What's

Jessica Dvoretz: these things that we're raising.

Petro Vaxevanakis: this?

Jessica Dvoretz: you know, I've thought about this before, I haven't. Um, and kind of what the question, what the things that are top of mind are today. And that is, you know, first party data that you can then put a white paper

Rebecca Lyus: So,

Jessica Dvoretz: around

Rebecca Lyus: I can beg a budget for us to get a sign with QR code to be able to go to this survey that we can do lot about the venue. Um, we just need to start thinking about questions because at the same time it can't be too

Petro Vaxevanakis: Yeah. Yeah. And the and the questions I guess are and it would be great if we decide now they would go

Rebecca Lyus: long.

Petro Vaxevanakis: into two directions. The one is we're trying to get additional data for the topics that we've agreed that we want to develop or we ask

00:46:38

Rebecca Lyus: Yep.

Petro Vaxevanakis: people to vote what are the most important topics that they want us to develop. I think the second is more of a plan B if we don't manage to do plan A.

Jessica Dvoretz: I think we should be able to do plan A.

Rebecca Lyus: here.

Petro Vaxevanakis: Let's

Jessica Dvoretz: And if we do this with the QR code,

Petro Vaxevanakis: go.

Jessica Dvoretz: I love the idea of being at the event, but can we also publicize the survey on kind of mock marketing channels for people who

Rebecca Lyus: Yep.

Jessica Dvoretz: aren't

Rebecca Lyus: Yeah. We uh How do we want to do this?

Jessica Dvoretz: there?

Rebecca Lyus: Cuz we could put it on our social media or we could put it on our newsletters or we can do both. Um so long as I get my head of marketing to not hate me uh for basically going I'm going to mess up your content plan for the next month.

Jessica Dvoretz: I mean, we could do it postevent,

Rebecca Lyus: Um,

Jessica Dvoretz: right? We could because I know they're going to want to use the marketing plan for the event for the next three

00:47:40

Rebecca Lyus: I think Yeah, I'm I'm also happy because it I'd rather us get it out before MacX so we can

Jessica Dvoretz: weeks.

Dylan Valade: That's not

Rebecca Lyus: merge all the datas because the MACH Tuesday is our call. So, we'll need to cancel that. Um,

Dylan Valade: Look.

Rebecca Lyus: so the next time we'd be able to discuss it would be the 13th of October. So, I'd rather start to tell what's happening before MACH in two weeks,

Dylan Valade: Yeah.

Rebecca Lyus: then we can release it. But that's just me from a data standpoint because I like data. I like reporting.

Dylan Valade: It would be nice to have some of that in hand before people start arriving and also for

Rebecca Lyus: Yeah.

Dylan Valade: the the membership to be able to hear from the alliance something that they don't already know. That would be a nice um opportunity.

Rebecca Lyus: And if we had stuff beforehand for any people in person can come up to me cuz I'm likely to be uh on registration for a chunk of it.

00:49:02

Rebecca Lyus: You can ask me questions about where we are with the answers. So you can use that to talk to people live as well.

Jessica Dvoretz: I like

Rebecca Lyus: It makes a great talking point.

Dylan Valade: Rebecca, do you know who normally or who has been putting together the types of surveys that

Rebecca Lyus: So

Dylan Valade: uh my clients has sent out before.

Rebecca Lyus: that would be me.

Dylan Valade: It's you. Okay, great.

Rebecca Lyus: Makes it nice and quick. If you get me the questions,

Dylan Valade: Perfect.

Rebecca Lyus: I can build you whatever you like. And in about 10 minutes, I have a call with our head of marketing for a different thing. Um,

Dylan Valade: Okay.

Rebecca Lyus: so I can drip feed this in. So it's not, we've made a survey. Please publish it and let people know.

Dylan Valade: Yeah.

Jessica Dvoretz: Okay. So, as the basis for the questions,

Rebecca Lyus: So

Jessica Dvoretz: do we want to put topics out there and ask like are they thinking about them now?

00:50:08

Jessica Dvoretz: Like timing type questions. Do we want to ask which of these are a priority in your organization today?

Rebecca Lyus: yeah,

Jessica Dvoretz: Um, do we want I'm

Rebecca Lyus: do we want people to rank them? Do we want to rank it as well to get people to rank their priorities?

Jessica Dvoretz: sorry.

Rebecca Lyus: Or is that a bit

Dylan Valade: I I would want to be able to establish kind of like some

Rebecca Lyus: too?

Dylan Valade: capability areas And then you could intuit it where they're at a little bit. So like if he said, "How confident are you that you are aware of the all of the licensing you have for Agentic Systems? How confident are you that your teams are able to control the data? um aligned to the policies that you've already established. How like like give some things that are a bit leading of like here's what governance is required to be successful. Here's what organizational and technical capabilities are required according to us with limited data. um that would just like starting to get a a sense check on where they are at and I think that would help inform a lot what's their maturity level and then we would be able to talk about probably like we see these trends already looking around the corner with you this is what you're ready to get ahead of and because these are the this is the facts that we have around people in September number October of

00:51:49

Dylan Valade: 2026 the game has changed in this way. We didn't realize it. This is where everyone's at right now. This is what MACH Alliance maybe could help with or we could research in particular if there's a

Rebecca Lyus: Huh?

Dylan Valade: pattern. Also happy to be wrong.

Rebecca Lyus: Okay.

Dylan Valade: So, any other opinions?

Jessica Dvoretz: I like those questions. I think I would probably start with one or two on kind of how the state of AI in their organization today. We could come up like they're still in pilot and experimentation role, you know, or maybe I think one of the yeah like I think one of the

Petro Vaxevanakis: More like the maturity.

Jessica Dvoretz: statistics out there is something like depending on which survey you read 65 to 90% of pilots never scale so kind of figuring out if people are in pilot versus enterprise scale right because I think those are some in if people are not yet scaling then that's a nice jumping off point to why but then I agree with you or I guess I should say and I agree with you that the types of questions you ask maybe should follow.

00:53:13

Petro Vaxevanakis: Once like once we kind of like rewrite the document a little bit based on the discussion today I think the questions will derive from that including all these questions that you just put forward. Um what's the what's the what what is our what is our before we like uh nail down the questions? What is our next step with the document that Everett has put together? What is the are we do we keep developing these? Um, do we actually want to write as we said like a teaser before Amsterdam? I I'm sorry. I I maybe I we already said that and it's almost end of my day. So, I may be a bit dizzy in case I missed it. Sorry for that.

Jessica Dvoretz: We've said a lot of things we haven't

Petro Vaxevanakis: We have And I was actually writing a message that I forgot to trigger my notemaker.

Jessica Dvoretz: priorit

Petro Vaxevanakis: And I would love if somebody can send me the notes after because we said so many

Rebecca Lyus: Yeah, no problem.

Petro Vaxevanakis: things.

00:54:14

Rebecca Lyus: I'm also going to write a summary up um using the notes, so don't worry. And they'll go to GitHub,

Petro Vaxevanakis: Awesome.

Rebecca Lyus: although I have been a little lax in that, so I do apologize.

Jessica Dvoretz: So given all the things we've said, I think we probably want to outline what we want this first shorter piece to be. Hopefully that would both then trigger um the teaser and the questions. And then to your point, Petro, I think we have three things we need to write.

Petro Vaxevanakis: Yes.

Jessica Dvoretz: The teaser, the article, and the question. The teaser, the questions, and the articles. I guess the question my what I'm less clear on is are is this

Petro Vaxevanakis: Yes.

Jessica Dvoretz: first article going to intended to include the survey data which would mean it can't get written until post survey or is the first article just provocative and the subsequent pieces utilize the data.

Petro Vaxevanakis: Yeah, I I would highly recommend the the the latter. So the article is the hook is is something that should be extremely simple.

00:55:17

Petro Vaxevanakis: Ideally, you should slightly divide and then ask for opinions so that we can then develop our topics like that. And that would work as a as a content funnel.

Rebecca Lyus: Sounds

Jessica Dvoretz: That's to So then the three things that we need are the that first short

Rebecca Lyus: good.

Jessica Dvoretz: punchy provocative article, um the survey, and then the teaser. Is it the teaser for the survey or the teaser for the article or somehow both?

Dylan Valade: I think the article is the teaser tease up the survey

Petro Vaxevanakis: Yeah.

Dylan Valade: postconference. We have to get into more depth and we use our data if it's useful and if it's not we could also

Petro Vaxevanakis: Yeah.

Dylan Valade: say that um still too much misinformation out there even to make sense of it. But hopefully we we have something to share back at that point and it is unique data like I said first party. We're the only ones with it and it's

Jessica Dvoretz: I mean,

Dylan Valade: valuable.

Jessica Dvoretz: there's value in it if it comes back so muddled.

00:56:25

Jessica Dvoretz: I think there's an article on that,

Dylan Valade: Yeah.

Jessica Dvoretz: too.

Petro Vaxevanakis: Dylan, I I really I really appreciate something you said before,

Jessica Dvoretz: Okay.

Petro Vaxevanakis: like you mentioned when are we ready to put this content out where we're comfortable that we've shared something valuable. Um I think that this is really like we talked earlier about how long should this be and like I think if we answer this question uh when we have the data or at any point like this is going to be the the main success. this metric like if we can share something and I think this is the opportunity like if we if we can have a really good uh hypothesis of what is interesting then get data from the community and then provide something that either concludes somewhere or concludes that we don't know this is going to be valuable so kind of like Dylan what I'm trying to say is that you you gave me more appetite to work on this project Uh,

Dylan Valade: Yes,

Petro Vaxevanakis: thank you for

Dylan Valade: that's my job.

Jessica Dvoretz: Nice work,

00:57:30

Dylan Valade: Thank you.

Jessica Dvoretz: Dylan.

Dylan Valade: Oh, good.

Petro Vaxevanakis: that.

Dylan Valade: All right. So, Rebecca, we got two minutes here. How do you want us to divide and and conquer or divide and collaborate?

Rebecca Lyus: O. Okay. So, I'm going to send a followup with all our things broken down. We have the next two weeks to figure out what questions we want. We can go back and forth with them. Who would like to lead the article?

Dylan Valade: Can I volunteer Petro or at least take a first stab at

Jessica Dvoretz: Sure.

Petro Vaxevanakis: Jess,

Dylan Valade: it?

Petro Vaxevanakis: want to partner on the project? Maybe we give it a go together.

Jessica Dvoretz: Sure. Be happy

Rebecca Lyus: Perfect.

Jessica Dvoretz: to.

Petro Vaxevanakis: Awesome.

Rebecca Lyus: Um, then that's it. Be free. We have two more.

Jessica Dvoretz: Uh Rebecca, um the just remind me the Gemini notes typically go in the Slack channel after the call.

Rebecca Lyus: uh they go into GitHub. I have been a little bit lag. I will let everyone know when I've updated them all today. All

Dylan Valade: I did put some notes in the Slack channel as we were talking.

Rebecca Lyus: right.

Jessica Dvoretz: Perfect.

Dylan Valade: These are not AI generated. They're my generators. I could be wrong.

Rebecca Lyus: Okay.

Dylan Valade: All right.

Rebecca Lyus: Good. All right.

Jessica Dvoretz: Thanks everyone.

Rebecca Lyus: Hey
